To ensure the highest quality product and to minimise the problems inherent with outsourcing, we rewind our own electric motors.

Brisbane Rewinding started as an in-house motor rewinding shop, and has grown into a successful business, supplying AC and DC motor and generator repairs to a large range of companies, including Thyssen Krump Elevators and Schindler Lifts.

### CE NEWS

December 20, 2019

### Modern Winding Machines

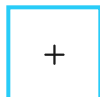

Our modern winding machines eliminates errors in winding coils and are capable of handling large motor windings with precision. We use industry standard varnishes to submerge, dip, and encapsulate the stators after winding. The varnish impregnation system ensures full slot penetration of varnish to guarantee no wire flex in the slot to eliminate slot burnouts.

SOCIAL SHARES

Not only do we service Australian and International companies, CE Engineering re-manufacture compressors for government organisations like various State Rail Authorities and the Australian Navy.
